

Basic Set Up

Basics for Using APO

- Define Products in Material and Product Master
- Define Locations in Material and Product Master

Creating integration models

Setup Consumptive Group

Reason for Deactivating DP: You are planning interactively in the product view with large data quantities, and want to improve performance.

1. You want to improve performance for Capable-to-Match planning (CTM planning).

2. You have performed CTM planning that has created fixed pegging relationships between requirements and stocks or receipts. You then want to display the pegging structure for an order in the order processing view. In order that the system only displays the pegging structure with fixed pegging relationships, you have to deactivate dynamic pegging.

Steps Beyond Basics

Deactivate Dynamic Pegging

Create a Planning Area and Planning Book

After Basic Setup

You may also want to create key figures for the quantity for which sales orders have been issued

Create a Requirements Strategy where forecasts are consumed by sales orders

Enter this Requirements Strategy in the Proposed strategy field of the Demand Tab Page

Enter settings for consumption

Chose a consumption mode

Chose a consumption period

Enter the consumption group

Check the pegging

The Assignment Mode determines how sales orders consume the forecast

ATP Tab Page

PP/DS Tab Page

Enter the ascertainment period

Enter the adjustment period

Sales Oriented Planning

Setting in the APO Product Master
